3. The following is an examiner's statement of reasons for allowance: In view of the items above, the material is found allowable. An absorbable polymer having at least one succinic anhydride moiety per chain and which is suitable for the biomedical industry is not suggested or disclosed in the prior art of record. Hamazaki (US 5322908) discloses a terpolymer having unsaturated carboxylic groups formed from grafting maleic acid onto the backbone. The terpolymer is disclosed to have excellent heat stability and shows good adhesion to substrates, two qualities which make it unsuitable for biomedical and pharmaceutical uses. Grafting maleic acid onto biocompatible polymers is not suggested nor disclosed. Peterson (US 2002/0034533) discloses biodegradable polymeric adhesives for tissue repair. Said adhesives are made from diols and one or more cyclic hydroxyl esters, creating polymers with terminal hydroxyl groups. Said hydroxyl groups are reacted with succinic anhydride to form

carboxylic terminus. Grafting anhydride or carboxylic acid groups onto the backbone is not suggested nor disclosed. Sacripante (US 5449719) and Bezwada (US5468253) are cited as articles of general interest.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
